

ADA

Automatic Damage Assessment:

The Automated Damage Assessment tool (ADA) is a deep learning model that identifies damaged buildings in satellite images after a disaster has happened.

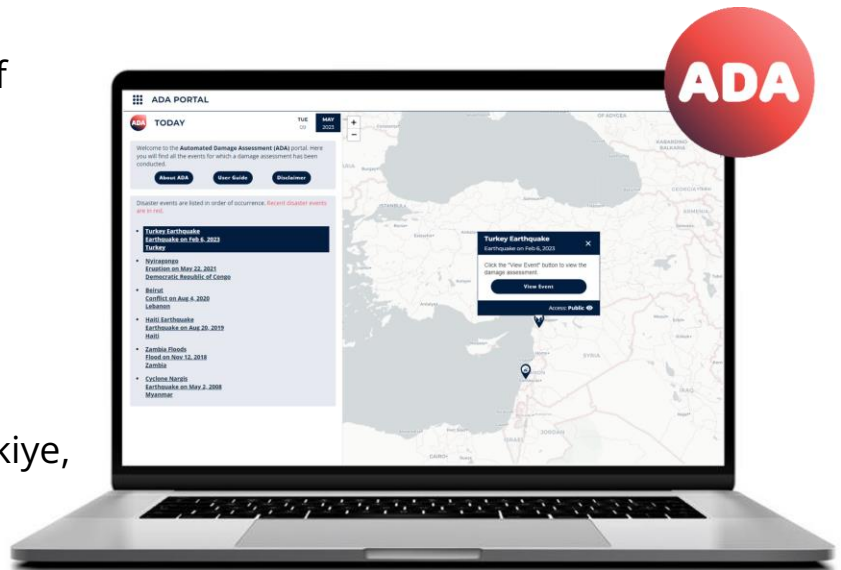

www.510.global/ADA

'I found ADA to be very helpful to get an initial understanding of the situation. Having Artificial Intelligence-assisted satellite damage tools lets us compare many different data sources.'

Corey Dickinson (Data Consultant at the IFRC)

- ✓ Fast identification of damaged buildings
- ✓ Less dependent on human effort
- ✓ Quick delivery of needed information
- ✓ Implemented in Türkiye, Syria, and Lebanon
